User Data
Relational Schema

HUB_USER

Username	FirstName	LastName	Email	Password	IsPrivate	Alias	Groups	UserPermissions	IsActive	IsSuperuser	LastLogin	DateJoined

Summary

StudentHub users will extend AbstractBaseUser to implement a custom user model with additional use-case specific fields
Existing fields from base User model will remain the same

The following are additional fields for the custom user model
-**IsPrivate**: (New) boolean to flag that a user has chosen to make their information private. Signals other apps not to render name, email, alias, and join date information. default=true
-**Alias:** (New) String user defines as their known as name in the system. This primarily masks their FirstName

Note: user profile, academic related, and other user-specific information will be represented in seperate models with one-to-one relations
